GIORDANI G 140 A.I.

Girorami G 140 A.I.

hydraulic front version

DESCRIPTION AND STANDARD EQUIPMENT

BORELLO G 140 A.I., the front hydraulic rake for branches can form a swath of branches cut while pruning centrally as to the tractor.

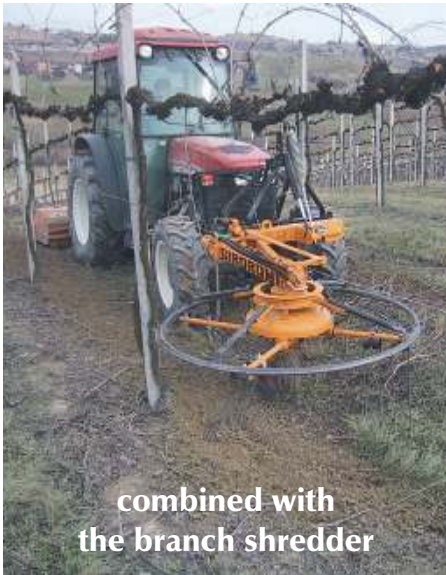

The tractor with rear branch shredder and front Girorami rake, makes the job easier and more economical in a single pass.

The central adjustable shock-absorber absorbs the efforts at work or further to an accidental contact with the tree protecting ring and lets the rake return to its original position. The elasticity of the spring teeth permits to work in any vineyard or orchard.

The hoisting cylinder makes it extremely easy to carry and very handy during the maneuvers at field head especially between the rows of vines on the slopes.

TECHNICAL FEATURES

combined with
the branch shredder

- Gearbox with hydraulic transmission
- 4 arms and two spring teeth per arm
- Working diameter Ø 140 (Ø 110 upon request)
- Transmission with hydraulic motor
- 1 full pivoting wheel adjustable in height
- Slant and working position adjustable with a crank
- To be hooked to the tractor with self-supporting frame or directly to the tractor if equipped with a front hydraulic hosting device
- Hydraulic cylinder for hoisting.
- Lateral displacement can take place manually by reaching a fixed position and hydraulically as an option.
- Demanded tractor power KW/CV 36/50
- Weight Kg. 320
- Hydraulic distributor with electric control upon request
