GIRORAMI

“NEW 8”

Girorami "New 8"

DESCRIPTION AND STANDARD EQUIPMENT

BORELLO NEW 8, pruning rakes make a 50 to 120 cm. wide swath of pruned branches in the middle of the row. This makes shredding or cleaning easier. A shock-absorber (BORELLO pruning rake patent) makes the operation easier. The elasticity of the spring tines permits to work in any kind of orchard whatever the ground. The gearbox parts are in oil bath therefore no maintenance is needed.

NEW 8 PRUNING RAKES by BORELLO are available in different versions as follows:

NEW 8 B.L. model long frame with double pto shaft suitable to any orchard.

NEW 8 B.C. model standard frame with pto shaft for espalier orchards only (Fig.1)

OPTIONAL EQUIPMENT:

- Hydraulic cylinder for lateral shift (strongly advised) (Fig.2).
- Plant buffer.

TECHNICAL FEATURES

- 8 arm gearbox
- 2 tines on each arm
- Gearbox entirely in oil bath
- P.T.O.: 540 rpm
- Working diameter: Ø 140 to 240 cm.
- Welded steel frame that can be displaced either manually or hydraulically so that the rotor can get close to the trees and remove the pruned twigs more easily
- Two cardan shafts with central joint
- 2 rubberized tyres
- Adjustable height with handle
- Three-point linkage to tractor
- The tool can be shifted on one side. Possibility of working as far as 200 cm. from the tractor wheel.
